INSTALLATION DETAILS

Installed at: Hotel Casa Iguana, Holbox Quintana Roo, México

Model:  Vulcan S10

The Vulcan S10 system is installed in the main entrance pipe to the hotel complex for protection and prevention of limescale deposits.

PURPOSE

Due to the high water hardness that exists on Holbox Island, the Hotel Casa Iguana has big problems of limescale deposits in the hydraulic system, which cause a decrease in the pipe diameter and water flow supply to the hotel complex.

SOLUTION

Reducing limescale of the hydraulic system, as well as in bathroom faucets, showers, toilets and kitchen. Keeping glassware free of white calcium stains, as well as glass and bathroom mirrors. Delivery of better water quality to the hotel complex.
