

Vulcan 5000

Dear Vulcan Team,

We thought it was great to be able to test the Vulcan 5000 and would like to say thank you once again.

Our conclusion:

The Vulcan 5000 was relatively easy to install, so having a third hand to secure the pulse bands properly is helpful, but otherwise it's easy. Since we installed a water system, we emptied, replaced, and cleaned all filters and water boilers, including those in the showers, dishwasher, kettle, etc. And what can I say, after a maximum of two days, you could already tell that the water was better.

However, we also have very hard water with a pH of 7.82 and a water hardness of 22°. The laundry is now softer and, after more than 6 weeks, there is still no sign of any deposits on the shower glass walls.

We remain with kind regards

The Sommer family
