## 6 weeks Vulcan Test

Hello Mrs. David,

I had promised to send you a short experience report after testing Vulcan.

Before the test, we removed limescale from everything as recommended and of course observed the changes closely.

The first change was the taste of the water. We used a soda streamer for a long time. But after our waterworks switched to a different well, the water no longer tasted good. With Vulcan, we enjoy using the soda streamer again and the water tastes great! This is also noticeable with coffee and tea.

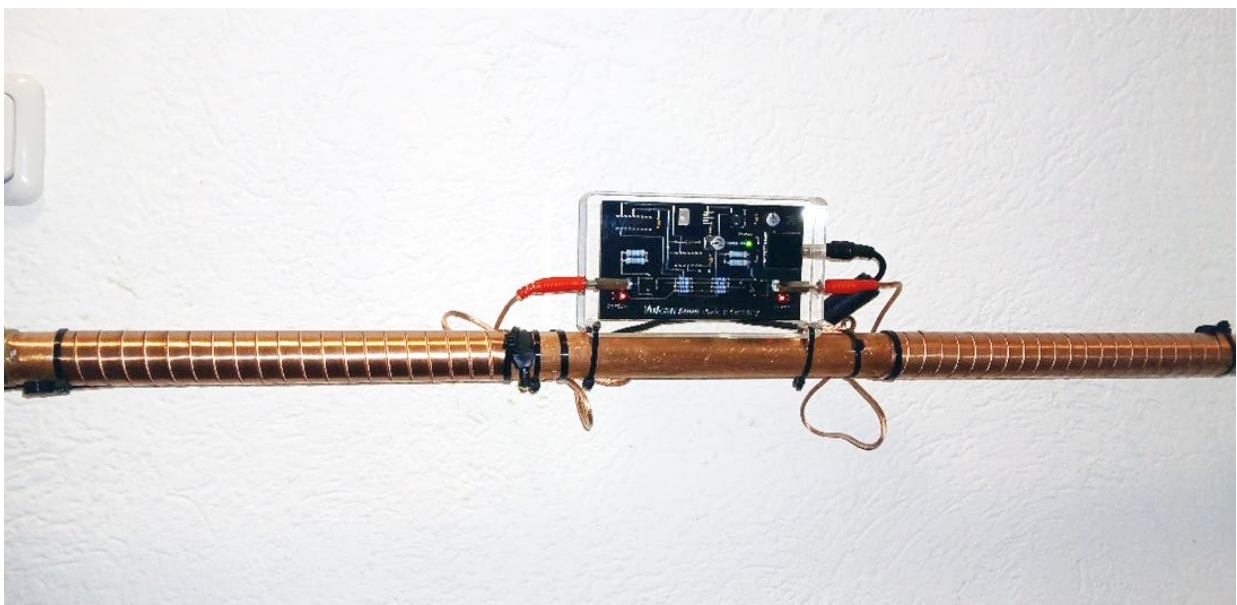

Limescale deposits in the kettle, on the shower screens and on the fittings can be easily wiped off.

The installation of Vulcan is very simple and there are no follow-up costs for maintenance. The power consumption is negligible.

We have been using Vulcan since September and my wife and I are delighted with it!

With best regards

Andrea und Thomas Sinsel
